

Jino R

Helping startups, businesses, and development agencies build practical digital products.

ABOUT ME

Hello, I'm Product Engineer good experience in Flutter development, backend engineering, system design, and product delivery. I work across mobile applications, web products, backend APIs, databases, architecture, hosting, and deployment. My current work includes product flow planning, architecture design, code reviews, backend development, technical problem solving, and coordinating an 8-member team. I have worked on products across food delivery, ERP, e-commerce, and healthcare domains

WHO I WORK WITH

- Startup founders who need an MVP or an initial product version.
- Businesses that need mobile applications or internal business software.
- Development agencies that need Flutter or full-stack product development support.

SERVICES

Service	What I Can Help With
Flutter App Development	Cross-platform mobile application development, feature implementation, API integration, and issue fixing.
MVP Development	Support from product flow planning to implementation and initial deployment.
Backend & API Development	Node.js, Express.js, NestJS, REST APIs, WebSockets, and backend integration.
System Design & Architecture	Application structure, architecture planning, clean architecture implementation, and scalable design concepts.
UI/UX Implementation	Translating product screens and user flows into functional mobile and web interfaces
Hosting & Deployment	Support with Docker, cloud/hosting platforms, deployment workflows, and production troubleshooting.

SELECTED PROJECT EXPERIENCE

FOOD DELIVERY PLATFORM

Role: Product Engineer | Duration: 3 months

- Contributed to system design, backend architecture, and technical team leadership.
- Worked across customer, shop, delivery partner, and admin applications.
- Used Flutter, React.js, Express.js, PostgreSQL, Redis, BullMQ, Firebase, push notifications, and Supabase.
- Contributed to a smart dispatch approach intended to reduce delivery-partner waiting time after accepting an order.

ERP PRODUCTS

- Contributed to product feature development, product flow planning, backend work, architecture discussions, and deployment activities.
- Supported business-oriented workflows and application issue resolution.

DOCTOR BOOKING APPLICATION

- Worked on client-side and doctor-side applications.
- Developed features, fixed issues, integrated APIs, supported testing, and assisted with application release processes

TECHNOLOGY STACK

Area	Technologies
Mobile	Flutter, Dart, Provider, BLoC, GetX, Riverpod, IOS
Backend	Node.js, Express.js, NestJS, REST APIs, WebSockets
Frontend	React.js, TypeScript, Next.js, HTML, CSS, Java script
Data & Services	PostgreSQL, MongoDB, Redis, Supabase, Firebase, SQL
DevOps & Tools	Docker, AWS, Render, Railway, Hostinger, GitHub
Architecture	Monolithic Architecture, Clean Architecture, Microservices Design Concepts

WORKING APPROACH

- Understand the business requirement and user flow.
- Plan the technical structure before implementation.
- Build features with attention to maintainability and integration.
- Review issues, test workflows, and support deployment.

- Coordinate with team members and communicate with clients when required
